MICHELL'S SUPERB DARWIN TULIPS

Darwin Tulips are more largely grown every year and considering the splendid form, exquisite coloring and the immense size of the numerous varieties it is not surprising that they have obtained great popularity. The color plate on first cover of this catalog can give only a faint idea of their beauty. While they belong to the late blooming or May Flowering class, they are distinct in style of growth; the gigantic flower cups are borne on straight, stout stems which are far above a broad foliage. For massing, bedding or border planting the Darwins are hard to equal. For pot culture they are splendid and are just the ideal tulip to grow for Easter. Please note there is no yellow colored Darwins and for this the May-flowering Tulip, Inglescombe Yellow may be used.

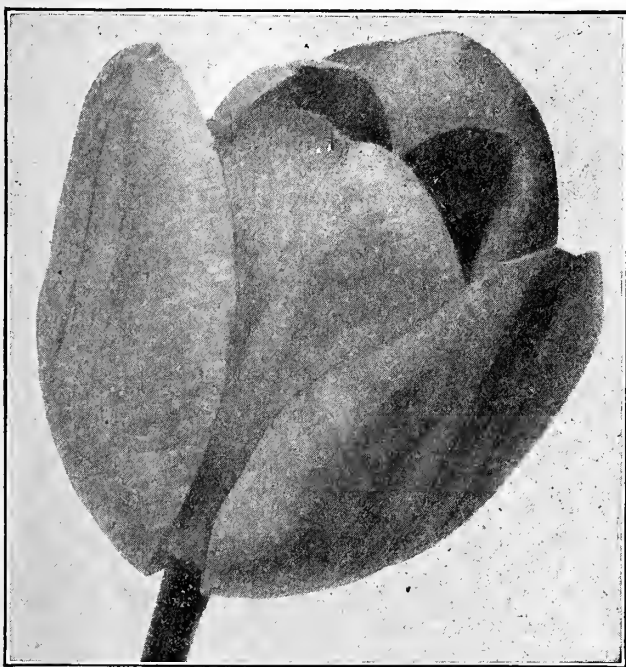

CULTURAL DIRECTIONS.—For Bedding Out. Plant in October or November in good, well-drained garden soil; set the bulbs 5 to 6 inches apart and 4 to 5 inches deep. After the ground has frozen, cover with litter, leaves or manure to protect them from frost; this should be removed in the spring when danger from hard frost is past.

For Pot or Pan Culture.—Plant 4 to 6 bulbs in a 6-inch pot or 6 bulbs in a 6-inch pan, water thoroughly and then remove to the open ground or in a cold frame, covering with coal ashes; after they have rooted thoroughly they should be brought in a moderately cool room and gradually warmer; by bringing in a fresh supply every ten days, they can be had in bloom all winter.

For complete cultural notes, see "Michell's Bulb-Growing Guide," sent free on request.

The asterisk (*) preceding the variety denotes that it is suitable for forcing as well as bedding. The letters E, F, G and H following the variety indicate their relative time of blooming, the E's being the earliest to bloom. The figures indicate the normal height in inches.

4 MICHELL'S MAY-FLOWERING OR COTTAGE TULIPS

Nothing in horticulture has received so much comment in late years as the late-flowering tulips. They well deserve the popularity they have gained, for no other of the spring flowering bulbs can approach them for brilliancy, beauty and usefulness. For planting in beds, massing in perennial border or planting in clumps they are ideal. They are also very desirable as cut flowers.

The asterisk (*) preceding the variety denotes that it is suitable for forcing as well as bedding. The letters E, F, G and H following the variety indicate their relative time of blooming, the E's being the earliest to bloom. The figures indicate the normal height in inches.

MICHELL'S SUPERB NAMED HYACINTHS

7

CULTURAL DIRECTIONS FOR HYACINTHS.—Outdoor Culture. Plant in October and November in good, well-drained garden soil. Plant bulbs so that the top will be 3 or 4 inches below the surface and 6 to 8 inches apart. After the ground has frozen, cover with litter, leaves or manure, to protect them from frost; this should be removed in the spring when danger from hard frost is past.

Pot Culture.—Plant any time from September to December, using a 4 or 5 inch pot for single bulbs, or several bulbs may be planted in a larger pot or bulb pan. After planting, water well and place in a cool, dark, airy place until well rooted, after which remove to a cool room and later to a warmer room.

Culture in Glasses.—The single varieties are the best. Place the bulb in a glass, which should be filled with water, so it touches the bottom of the bulb, and place the glasses in a cool, dark place. Change the water occasionally. Keep in the dark until well rooted and then remove to a light, cool place.

For complete cultural notes, see "Michell's Bulb Growing Guide" sent free on request.

FRENCH ROMAN HYACINTHS

French Roman Hyacinths afford a continuous supply of bloom from early winter until late in spring if planted in succession. They are very fragrant.

Easily grown in pots or pans; if bulbs are potted in September, the pots plunged in the open ground for a month, until well rooted, and then brought in the house, they can be had in flower in November or December, and a continuous supply of flowers may be had by bringing in a few pots or pans at intervals of about 2 weeks. The bulbs should be planted quite close together, a 6-inch pot or pan will be sufficiently large for six bulbs. They are not hardy and are not suitable for outdoor planting.

MICHELL'S SUPERB NARCISSUS OR DAFFODILS

AMERICAN GROWN

No garden is complete without the Narcissus or Daffodil, being among the most beautiful and fragrant of our hardy Spring flowering bulbs, doing well in almost all soils and situations, for naturalizing, planting among shrubbery and in formal beds. For house or greenhouse culture they are equally desirable, planted in pots or pans.

Culture.—Owing to the various sizes of the bulbs of different varieties, we cannot advisably give the exact depth to plant, but a good rule to follow is to cover the bulb one and one-half times its own depth. For house culture 3 or 4 bulbs can be put in a 5-inch or 6-inch pan or pot and given the same treatment as Hyacinths.

MICHELL'S PREPARED BULB FIBRE

The ideal material in which to grow bulbs, such as Roman Hyacinths, Dutch Hyacinths, Narcissus, Tulips, etc., using vases, crocks, or other receptacles, without drainage. The advantage of this system is that the vases can be placed anywhere about the house, in the drawing room, or dining room, without any fear of water or soil coming through the base of the pots. The bulbs are potted the same way as in ordinary soil, after which they require little attention, except to keep the material moist.

Price, 15c. per qt.; 4 qts., 45c.; 75c. per peck; ½ bu., \$1.25; \$2.00 per bu.

Double Narcissus, Von Sion

DOUBLE NARCISSUS

The double-flowering Narcissus are perfectly hardy, very popular and well adapted to outdoor planting. Most of the varieties are also excellent for house and conservatory growing in pots or pans.

Alba Plena Odorata. A very sweet-scented pure white variety called Double Poet's Narcissus; it flowers later than many of the other daffodils and is not desirable for forcing; height about 15 inches. 20c. each; doz., \$2.00; \$14.00 per 100.

Incomparable Double. On account of the peculiar suffusion of the colors in the flower, this variety is also known as "Butter and Eggs." Color, yellow with orange center, attractive cut bloom. Its greatest value is for outdoor planting, as it does not force so well. Height about 16 inches. 20c. each; doz., \$1.75; \$13.00 per 100.

Orange Phoenix. This is sometimes called "Eggs and Bacon." Light yellow, almost white, with an orange yellow center. Splendid for pot culture. Height, 16 inches. 25c. each; doz., \$2.50; \$16.00 per 100.

Primrose Phoenix. Large rose-shaped flowers of a beautiful primrose yellow shade. 30c. each; doz., \$3.00; \$22.00 per 100.

Sulphur, or Silver Phoenix. Flowers very large; bluish-white, sulphur colored center; excellent for forcing or outdoor planting. Height about 18 inches. 25c. each; doz., \$2.50; \$16.00 per 100.

Von Sion (Telamoni Plenus). The true double daffodil. The color is a pure golden yellow, entirely free from green-tipped flowers, which are often found in cheap grades. For forcing or outdoor planting it has no equal. It should be planted extensively for naturalizing.

MICHELL'S HARDY GARDEN LILIES

11

Lilium Auratum

Cultural Directions.—All Hardy Lilies should be planted from 6 to 8 inches deep, the Japan varieties even 12 inches deep; the bulbs should be completely enveloped in sand; no manure should come in contact with the bulbs, but may be placed 4 to 6 inches underneath. All loose petaled bulbs should be planted on their side instead of upright. Cover with leaves or litter during winter. Hardy Lilies are sometimes grown in pots for indoor blooming, in which case they are handled much like the Bermuda Easter Lilies.

If Lily Bulbs are wanted by Parcel Post, add 25c. per doz. for postage.

MICHELL'S SUPERB LILY BULBS

MICHELL'S EASTER LILY BULBS

For Indoor Culture

Cultural Note.—In order to obtain best results, attention to the following directions will assist materially: Upon receiving the bulbs, pot them immediately. Place a handful of well rotted cow manure in the bottom of the pot and place the bulb directly on top, covering it with soil. After watering, place in an outside pit and protect from the direct rays of the sun; cover well with soil, ashes or any other suitable litter. When the bulbs have become thoroughly rooted, bring inside, in a temperature of about 60 degrees; let the plants grow slowly under a bench or some other suitable place until about 6 inches high, then place on top of the bench. About two months before Easter they can be brought into a warmer temperature and gradually forced into flower and height at one time. An occasional application of liquid cow manure, starting about six weeks before flowering time, will stimulate the plant wonderfully. Thorough rooting is the most essential point.

Lilium Candidum

LILIUM CANDIDUM

(Madonna Lily)

This variety is sometimes called St. Joseph's, Madonna, or Annunciation Lily. One of the most popular and satisfactory of the American garden lilies. Pure waxy white flowers produced on straight stems, bearing anywhere from 10 to 30 blooms of good size and substance, and delightfully fragrant. Effective planting is the result of massing them in clumps or borders. Our bulbs are grown where they have a reputation of growing the finest in the world. To insure absolute success, plant the bulbs as early as possible—September preferred—6 inches deep, imbedded in sand and placed on their side; height, 4 feet; blooms in June.

LILIUM REGALE *or* MYRIOPHYLLUM

Queen of the Lilies

Royal

Lily

of

China

Unsurpassed

for

its

fragrance

ONE OF THE finest garden Lilies introduced; perfectly hardy, thriving well in any good garden soil and should find a place in every garden. A vigorous grower with sturdy stems, three to five feet high, densely covered with long lanceolate foliage, and crowned with an abundance of blooms, the number depending upon size of bulbs planted. Produces large, beautiful flowers, the center of which is flushed bright golden yellow, shading off to creamy white at outer edges; externally the flowers are streaked with brown, shading through the almost translucent petals with a delightful pearly tint, making an extraordinary beautiful contrast; the flowers last for many days after being cut. Should be planted in Fall or early Spring, eight to nine inches deep; commences flowering in July.

Lilium Regale has also been used for forcing with fairly good results and if properly handled can be grown in any good greenhouse soil, the same as is used for Lilium Giganteum. When potted up it is suggested that they be placed on top of bench, as being a stem-rooting variety it is necessary that top and root action start together, keeping them well watered and started in a temperature of 52/58 degrees. Feed from time to time with bone meal or liquid manure, gradually increasing the heat to 65/75 degrees, to produce firm flowers, allowing about ninety days time to bring into bloom. For forcing it is recommended that only larger sizes of bulbs be used, such tests having been made and fairly good results obtained.

The stock we offer has been grown and produced under ideal conditions, and all bulbs supplied are of the best quality.

Michell's Giant Crocus

CROCUS

One of the earliest flowers to bloom in spring; most effective for borders or beds, also for planting in clumps amongst shrubbery. In lawns, planted in the grass the Crocus are extremely effective.

An effective method of planting is to scatter them over the lawn by digging up a small piece of sod here and there and placing one or two bulbs in each spot, this gives a very pretty effect.

The Giant Flowering varieties are also splendid for flowering in pots, but too severe forcing must not be attempted.

If wanted by Parcel Post, add 15c. per 100, for postage.

MICHELL'S DORMANT FIELD-GROWN ROSES FOR FALL PLANTING

Many of the most successful Rose growers prefer planting their Roses in the Autumn. We are now booking orders for strong two-year-old Field-Grown budded plants, which will be ready for shipment just as soon as they are properly ripened by frost, which is usually late in October or early in November. Plants shipped in the dormant state take up but very little room and they may be safely shipped by parcel post. If there is danger of the ground freezing before the arrival of the plants, the space where you wish to plant them may be protected by a covering of leaves or other loose litter. When the plants arrive, plant them so that the bud is covered with at least one inch of soil; then make a mound of earth around the base of the plant about twelve inches high; by doing this all of the buds on the lower end of the branches are covered with soil; this covering protects them from the alternate freezing and thawing, which is so injurious. Early in the Spring, before growth starts—but after danger of severe frost is over, this covering of earth should be removed and the plants pruned.

Briarcliff. A sport from Columbia, having all of the good qualities of its parent but of a more brilliant color, being a clear rose-pink. Long pointed buds, very fragrant and a vigorous grower.

Columbia. One of the most popular of the newer roses, being a vigorous grower and very free flowering. The flowers are of a pleasing shade of rose pink, large, fragrant and perfect in form.

Etoile de France. Well formed buds that develop into full open flowers of red and soft velvet crimson, shading to vivid cerise. One of the very best and most dependable Roses of its color; needed in every garden.

Gruss an Teplitz. This is a rose for everybody, being the most profuse blooming crimson rose in existence. The color is of the richest scarlet, shading to a velvety crimson; very fragrant. It will succeed under the most ordinary conditions, doing well where other roses fail.

H. V. Machin. A good strong grower, producing large flowers of excellent quality, deep scarlet-crimson in color.

Jonkheer J. L. Mock. A favorite with hundreds of Rose lovers. The flowers are extra large and of more than ordinary beauty. The bright cherry red on the outside of the broad petals and the shining silvery white on the inside make a double colored bloom.

Kaiserin Augusta Victoria. An old variety but still one of the best and it should be in every collection. In color it is a soft pearly white tinted with lemon.

Killarney Queen. Another excellent development of the Killarney family, bearing distinct clear pink blooms, somewhat darker than the parent sort, these blooms being large and well-formed.

Lady Alice Stanley. A rose that is admired by every one, not only for its freedom of bloom and fragrance, but also for its color, which is a beautiful shade of coral-rose on the outside of the petals with purple flesh on the inside.

Lady Ashtown. Extremely beautiful flowers of pale carmine-pink, shading to golden yellow at the base of the petals. The blooms are large, globular, and well formed, rather higher in the center than at the edge. Excellent for garden or greenhouse and a profuse bloomer all season until frost.

Los Angeles. A wonderful American Rose, introduced in 1917 and described by the originators as follows: "Los Angeles is by all odds one of the finest Roses ever introduced. In color a luminous flame pink toned with coral and shaded with translucent gold at the base of the petals. In fragrance it is equal in intensity to the finest Marechal Neil. The buds are long, pointed and extend into a flower of mammoth proportions. The growth is vigorous to a degree. The beauty of the form and ever increasing wealth of color are maintained from the incipient bud until the last petal drops."

Mme. Alexander Dreux. A desirable garden Rose of vigorous, compact free flowering habit. The flowers are a brilliant copy-yellow, deep and full. A very pretty Rose, splendid for cutting.

Mme. Butterfly. While this is a sport of Ophelia, it shows an even better growth, with more and larger flowers, in a brilliant pink, suffused apricot and gold. These flowers are in the ideal Rose form, of good texture and fragrance, and are unusually enduring. The plant is free and fine in growth and habit.

Mme. Caroline Testout. One of the most popular and valuable bedding varieties; large globular flowers of bright satiny rose with brighter center. Strong vigorous grower; very free flowering and fragrant; particularly fine in Autumn.

Mrs. Aaron Ward. A very free blooming variety of vigorous but compact growth. The flowers, which are of splendid form are full double and are equally attractive when in full bloom as in the bud state. The color is a distinct Indian yellow which under certain conditions becomes yellow tinted white. A favorite everywhere.

Mrs. Mackellar. Large, finely formed and fragrant; buds and blooms of saffron-yellow, passing to pearly primrose.

Price, any of the above (except where noted), \$1.00 each (by P. P., \$1.10); per doz., \$11.00 (by P. P., \$12.00); \$90.00 per 100.

Hybrid Tea Rose, Lady Ashtown

Ophelia. This is a variety that has made such a record for itself, that it must be classed among the very best, a rose that is admired by everybody. The flowers held erect on long stems are of perfect form, are of a pleasing shade of light salmon flesh shading to pale yellow at the base of the petals.

Premier. A good strong grower, producing large, brilliant deep pink flowers on long stems; very fragrant and particularly good in late summer and fall.

Radiance. A Rose of American origin and to our mind one of the very best varieties in cultivation today. It is an ideal bedder, producing large flowers throughout the Summer when many other varieties are out of bloom; in color a beautiful even shade of pink. This Rose should be in every garden.

Red Radiance. A counterpart of Radiance from which it is a "sport," possessing all of the good points of that valuable variety, but differing in color, which is bright cerise-red.

Souvenir de Claudius Pernet. A most vigorous grower of erect branching habit; beautiful, brilliant green foliage; long pointed buds of exquisite shape, carried on long, stiff stems. Very large full flowers with elongated deep petals, a beautifully formed bloom. Color, a most striking sunflower-yellow, deeper in the center without any color blending and which is retained without fading even in the warmest weather.

Souv. de Georges Pernet. A strong vigorous grower and free bloomer. The flowers are large, globular in form; color, Orient red shading to a cochineal-carmine at the end of the petals, the whole being suffused with a golden sheen.

Templar. A beautiful red Rose with long pointed buds opening into very large double flowers; very good early in the season and late in the autumn.

MICHELL'S DORMANT FIELD-GROWN ROSES FOR FALL PLANTING

29

HARDY CLIMBING AND RAMBLER ROSES

As an ornamental plant for covering verandas, porches, side walls, pillars, fences, etc., these are unequalled, calling forth more admiration than anything else that can be used. They require no pruning in the Spring beyond the cutting out of very old or dead wood and shortening of the laterals and long canes to make the growth conform to the space to be covered, but a severe pruning in July directly after they have finished flowering is beneficial. Cutting away at that time all old flowering wood will encourage a vigorous growth, which will give an abundance of flowers the following season.

American Pillar. The large single flowers are a lovely shade of cherry pink, with a clear white eye surrounding numerous golden yellow stamens.

Aviateur Bleriot. A strong growing plant with beautiful glossy insect and disease proof foliage, bearing large clusters of medium full sized double flowers of a saffron yellow dispersing to an almost golden yellow in the center.

Bess Lovett. Resembles Climbing American Beauty in shape of flower, but much brighter in color, being a clear bright red, double, full cupped form and of notable lasting quality.

Christine Wright. A beautiful rose of strong climbing habit, producing double flowers 3 to 4 inches in diameter, singly and in clusters, of a wild rose pink.

Climbing American Beauty. The name of this rose is rather misleading, yet on its own merits it is a splendid climber. It has but one blooming season, June, when it bears very abundantly a very bright self colored, medium pink flower of moderate size.

Dr. W. Van Fleet. One of the most important climbing roses, having perfectly formed buds, long and pointed, deep pink in color and very solid. The full blown flowers are very large, borne on long stems, fragrant and fine for cutting.

Dorothy Perkins. Beautiful shell pink, fragrant and full, blooming in clusters in June. The most popular of all climbing roses during the past few years. This is a very good rose for covering stone walls, fences, embankments and arbors.

Emily Gray. In this we have a real yellow climbing Rose as hardy as Dr. Van Fleet. The buds are long and pointed, of splendid shape; in color a beautiful light orange-yellow, changing to pale orange as they expand; they are borne on stiff stems of sufficient length for cutting; these stems are of a crimson-red color, which together with the unusually dark green, glossy, holly-like foliage, adds a charm to the flowers and makes the plant, even when out of bloom, a most ornamental object.

Excelsa. Here we have a worthy successor to Crimson Rambler, being equally as free flowering as that variety but without its unsatisfactory foliage, this variety being a true Wichuriana rambler with all of the strong wiry growth and beautiful foliage of this desirable class. Really the best double red rambler.

Gardenia. A very desirable Yellow Climbing Rose. The flowers are of a pleasing shade of yellow in bud form, turning to a creamy white as the flowers open.

Jacotte. A wonderful new yellow climbing rose with bright glossy green foliage and sweet scented orange-yellow flowers. One of the best climbers.

Paul's Scarlet Climber. No other rose in any class can compare with it for brilliancy of color, which is a vivid scarlet that is maintained without burning or bleaching until the petals fall.

Silver Moon. An indispensable hardy climber having long well shaped buds, creamy yellow on first appearance, opening into immense Clematis like flowers of a waxy whiteness. The center is a mass of bright yellow stamens, making a wonderful contrast.

Tausendschoen. The individual flowers are of a most elegant and graceful form. In color it is a most delicate shade of soft pink when first opening, changing to carmine on the reverse of the petals when fully expanded. The flowers are produced in trusses, each truss almost a bouquet in itself.

White Dorothy. A handsome pure white sport from the old favorite Dorothy Perkins, and it has all of the finer qualities found in that charming variety.

Extra strong plants of any of the above, \$1.00 each (by P. P., \$1.10); doz., \$11.00 (by P. P., \$12.00); \$90.00 per 100.

Hybrid Perpetual Rose, Ulrich Brunner

HARDY HYBRID PERPETUAL ROSES

Before the development of the Hybrid Teas, this was the most popular type for garden planting and even now they should not be overlooked, but should be used extensively in conjunction with the other sorts. They are perfectly hardy and of vigorous growth, blooming tremendously in June and sometimes sparingly in Autumn. Hybrid Perpetuals are taller in growth and need more space than the Hybrid Teas; in pruning cut away all weak growth, and if quality of bloom is desired, cut back the strong canes to within 8 or 9 inches of the ground, but if quantity of bloom for garden effect is desired, leave these canes from 2 to 3 feet high, according to their strength.

Frau Karl Druschki. This is the queen of all white roses both in size and purity. The flower is very double and opens to a pure snow white. The growth is vigorous and the plant is a most prolific bloomer during the month of June. Scattering flowers often appear in the Fall.

Magna Charta. An old variety of great merit. The blooms are of large size, in color a bright pink suffused with carmine. It is very fragrant and free flowering.

Paul Neyron. Probably the largest rose in cultivation; in color a clear pink shading to soft rose and having a delightful fragrance. A strong vigorous grower.

Ulrich Brunner. Bright cherry red flowers of large size and good form, produced freely on long stems. An old favorite and very desirable.

BABY RAMBLER ROSES

These are very popular for bedding purposes, growing about 18 inches high and producing a great profusion of immense trusses of small flowers from early in the season until severe frost. Pruning is not necessary, simply remove the last season's flower stems. **Ideal.** The darkest in color of the Baby Ramblers, a rich garnet; very free flowering and outstanding.

Mme. Norbert Levavasseur. This is well known as the Crimson Baby Rambler and one of the most popular varieties.

Orleans. One of the best, flowers of comparatively large size of brilliant geranium-red, becoming suffused with rose as the flowers mature, large white center; a very pretty color combination.

MICHELL'S HARDY PERENNIAL PLANTS

Year by year these old fashioned hardy flowers are gaining favor and deservedly so, as there is not a time during the whole flowering season when some variety is not in bloom; they are especially valuable during the late Summer and Autumn, when there are but few shrubs in bloom. From early April they continue with constant changing variety throughout the Summer and Fall, when they are stopped only by severe freezing weather. Hardy Perennials appear year after year, and as each variety has a fixed time for blooming, a selection can be made that will give flowers to cut from early Spring until late Fall. The most satisfactory arrangement is to plant them in a border, which can be made in front of a hedge, fence or wall, or in the open garden; the soil should be dug to a depth of 18 inches or two feet, pulverizing it thoroughly and working in a liberal quantity of well decomposed stable manure or other fertilizer. The plants should be placed in groups of three or more of one variety together, the taller growing sorts at the back, the medium heights in the center and the dwarf varieties in front; they should also be placed so as to have some flowers in all parts of the border at all times. This can be easily arranged by referring to our descriptions as to the time of flowering. Our book on "The Hardy Flower Garden" is an instructive publication, and it can be had free on request. We offer here only such varieties as can be planted in the autumn.

All plants are forwarded on receipt of order unless instructed to the contrary, and are sent by Express, purchaser paying charges. We can forward small plants or small numbers of plants by Parcel Post, and if wanted sent in this way add the amount as stated in connection with the item, to cover postage and packing charges.

SPECIAL NOTICE ON GUARANTEE

We spare no effort to supply plants of the best quality in first-class living condition. On account of the many causes beyond our control we regret we cannot guarantee this stock to live and establish itself, as that is usually entirely within the power of the buyer or planter. If customers desire us to guarantee plants and shrubs to live we will assume such guarantee at an advance of 25 per cent. over and above our usual prices, but not otherwise, and such guarantee will expire within 90 days from date of shipment.

Next to Roses these are the most popular June flowers, and justly so, for they lend themselves to almost any style of planting, while for the little care required they give a variety of color and wealth of bloom unequalled by any other plant. Their requirements are few; they will succeed in any good garden soil in an open sunny position. Care should be taken, however, to keep all fresh manure away from the roots—if barnyard manure is used it must be thoroughly decomposed—if you are unable to procure this, Bone Meal makes a good fertilizer. Peonies may be planted any time after September 1st until the ground freezes in the Autumn, and in the early Spring until the season is too far advanced; the best time, however, is during September and October, as they make roots during the moist cool weather of the Autumn and consequently carry through the Winter in better shape. The roots should be set so that the top or upper eyes are about two or not more than three inches below the level of the soil; do not set the roots flat, but stand them up. For best results Peonies should be planted from three to four feet apart each way, according to the space at your disposal; the ground around them should be well cultivated at all times and in the Spring after growth starts they should have an abundance of water if the season is at all dry. When cutting the flowers always leave one or two bottom leaves; it is best to leave a few flowers on the plant also, as it is of vital importance that sufficient foliage be left to develop the eyes under the ground for next season's growth. Newly planted roots may not develop a characteristic flower the first season, in fact it is usually not until the third year that perfect flowers true to description will be produced. Peonies are seldom troubled with any disease or insect pests; ants sometimes appear on the buds coming to gather a sweet gum which the bud exudes while developing; they will do no harm and will disappear when the flower opens.

Vines play an important part in the landscape of the home. There are so many purposes they fill that we cannot recommend too highly their general use.

AKEBIA—Quinata. A quick-growing vine; small, fine-lobed, half-evergreen leaves, and purplish brown or chocolate-colored flowers, which have a delicious odor. This plant is highly desirable where a dense shade is not desired. Extra strong plants, 75c. each (by P. P., 90c.); 6 for \$3.25; 12 for \$6.00.

AMPELOPSIS—Quinquefolia (*Virginia Creeper*). The large handsome, dark green leaves are deeply cut into five lobes; in the autumn the foliage turns a beautiful rich crimson; especially adapted to covering tree stumps and trunks. Extra strong plants, 50c. each (by P. P., 60c.); per doz., \$5.00.

ARISTOLOCHIA—Sipho (*Dutchman's Pipe*). Handsome light green leaves, giving a quick, dense shade. The brown flowers are shaped like the bowl of a pipe. Large plants \$1.00 each (by P. P., \$1.25).

BIGNONIA—Radicans (*Trumpet Vine*). A strong-growing vine, with rich green foliage and trumpet shaped flowers, dark red, throat shaded orange; free flowering. Strong plants, 50c. each (by P. P., 60c.).

CELASTRUS SCANDENS (*Bittersweet or Waxwort*). A vine of rapid growth. In the early summer it produces yellow flowers, which by autumn have turned to bright, orange-colored fruits with red markings. Extra strong plants, 50c. each (by P. P., 60c.).

CLEMATIS—Paniculata (*Japanese Virgin's Bower*). A strong, luxuriant grower, with light green foliage. At the close of August innumerable small, star-like flowers cover the vine in a sheet of fragrant white. It delights in plenty of sunlight, rich soil and plenty of water in dry weather. Strong plants 3 for \$1.00 (by P. P., \$1.15); \$3.00 per doz. (by P. P., \$3.30); \$18.00 per 100. Extra strong plants, 50c. each (by P. P., 60c.); per doz., \$5.00; \$35.00 per 100.

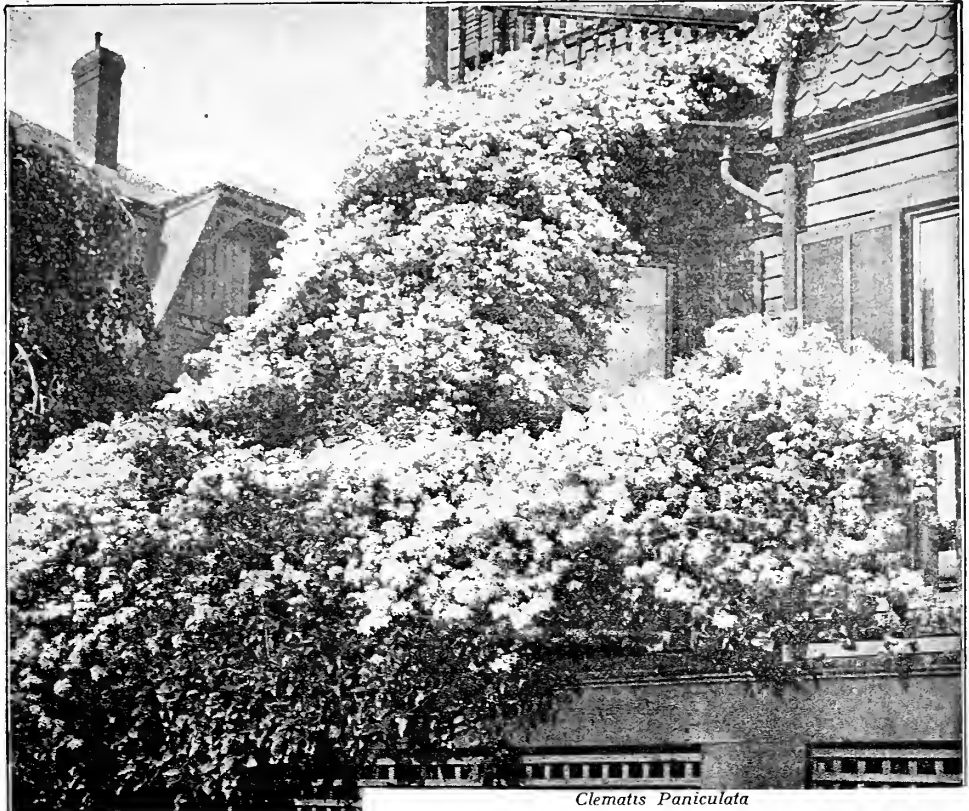

EUONYMOUS—Radicans. Self-clinging vine, suitable for covering walls, stumps or rockeries, or wherever a vine of slow growing habit is desired; green foliage.

—**Variegata.** Leaves are variegated; otherwise like the above variety.

—**Vegeta.** This plant is regarded far too little in importance as a strictly A-1 variety for climbing stone walls of buildings or otherwise; it ranks favorably with English Ivy, except that it is evergreen and does not winter kill or shed its foliage. The foliage is larger than that of the type *Radicans*, and the plant produces an orange-colored berry, which remains on the plant the most part of the winter. Euonymous *Vegeta* should be planted more extensively than it is.

Price of any of the above Euonymous, strong 2-year plants, 3 for \$1.00 (by P. P., \$1.15); \$3.00 per doz.; per 100, \$18.00.

POLYGONUM—Auberti. For porches, lattice work, fences, buildings, etc. A useful vine which is perfectly hardy and free from disease or pests. It is quick growing, a small plant making twenty-five to thirty feet of growth the first summer, and producing clouds of snowy white flowers, borne in long clusters which turn rose color with age. The foliage is clean looking and attractive and apart from its wonderful flower effect will please everyone by its appearance. It will not cling to the wall, but will ramble over anything that will support it. Extra strong plants, 75c. each (by P. P., 90c.).

WISTARIA. This flowers in the latitude of Philadelphia during May. A strong developed vine produces hundreds of flower panicles, while no foliage is visible until after the flower is faded. They thrive best in the sun, and with an application of cow manure once or twice a season they respond marvelously by an extra growth and an abundance of flowers.

—**Chinensis** (*Chinese Wistaria*). Pale blue; somewhat fragrant. Extra strong plants.

MICHELL'S CHOICE THRIFTY HEDGE PLANTS

NEW RED-LEAVED JAPANESE BARBERRY

Introducers Description

It is only once in a lifetime that a really worth-while, outstanding novelty in hardy shrubs is introduced and in this new Barberry we have such a plant.

It is similar in all respects to the green-leaved Japanese Barberry which is so popular for mixing in the shrubbery border, as single specimens, or for planting in clumps on the lawn, as well as for foundation plantings and for hedges, but the foliage of this new variety is of a rich, lustrous, bronzy red, similar to the richest red-leaved Japanese Maples. However, unlike these and other colored shrubs in which the coloring fades or disappears entirely as the season advances, this new Barberry becomes more brilliant and gorgeous throughout the summer, and in the fall its foliage changes to vivid orange, scarlet, and red shades, more brilliant and more effective than in the ordinary Japanese Barberry. In this coloring it is unequalled by any other shrub and is followed by the same brilliant scarlet berries common to the type, which remain on the plant the entire winter.

All that is required to develop its brilliant coloring at all seasons is that it be planted in full exposure to the sun.

BERBERIS THUNBERGII (Japanese Barberry)

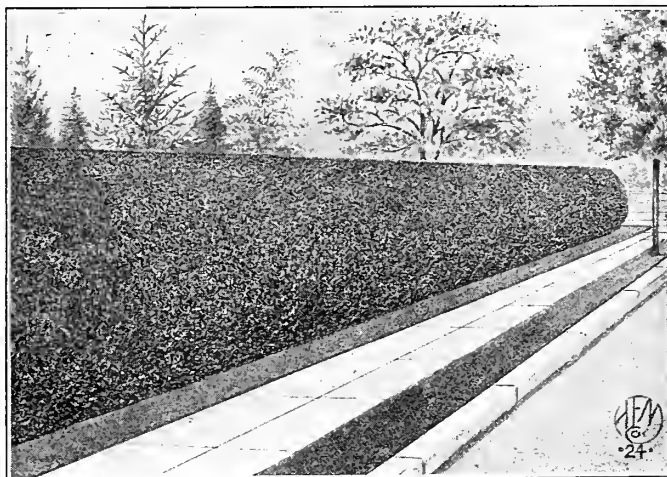

A good hardy plant of low dense growth. It is a brilliant light green from early spring to winter; it should be regarded as a shrub as it can be planted individually in lawn or border. The slender branches are prickly, with small thorns, and tend to make a defensive hedge that few animals will attempt to penetrate. In autumn the foliage is a bright crimson; when it falls a profusion of scarlet berries, which remain throughout the winter, are revealed on the branches.

LODENSE PRIVET

A new variety of which the name is very descriptive, as it is dwarf and compact in growth, very much like Boxwood. It makes a low thick hedge which requires but very little trimming, in fact rows of this Privet at our Nursery, that have been growing there for three years are as symmetrical as one could wish and these plants have had no trimming whatever. It can also be planted as single specimens, as it naturally grows almost a perfect ball shape.

	Each	Doz.	100

California Privet

CALIFORNIA PRIVET

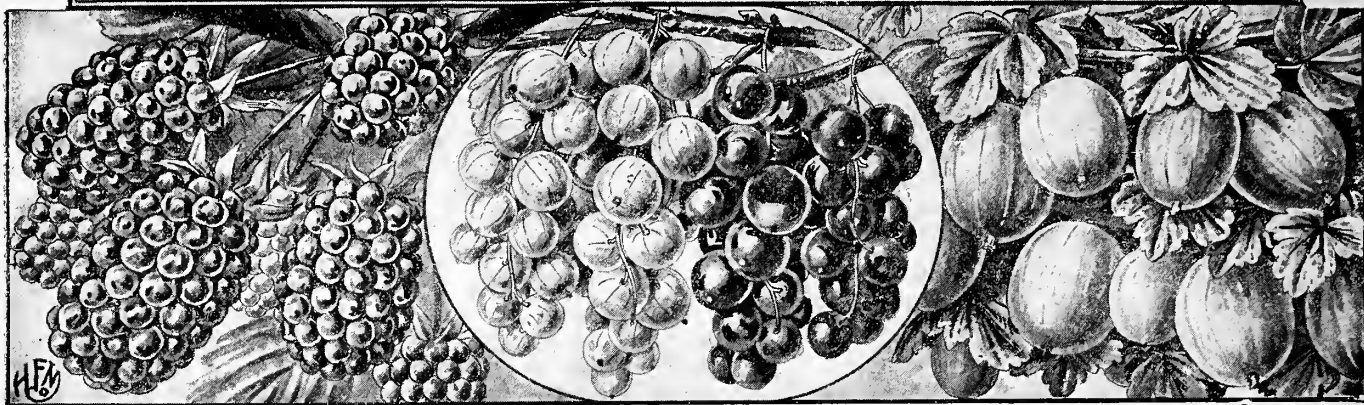

Unlike a fence, which needs painting, repairing, etc., and then never looks well, this hedge is no further expense after planted and it adds dignity and charm to any home. Privet is somewhat of an Evergreen nature and looks attractive until real winter sets in. Plants should be set 12 inches apart in double rows, in zig-zag fashion, so that the plants are diagonally opposite each other; this practically places them 6 inches apart, which is desirable to get a thick, dense growth. Plant from October 15th till the ground freezes, and from March 15th to May 15th.

2-yr. old, 30 to 36 inches.....	2.00	10.00	90.00

GOLDEN OR VARIEGATED PRIVET

Like the California variety, but each leaf is margined and blotched golden yellow, giving it, from a distance a striking appearance. **Bushy Plants** 75c. each; doz., \$7.50.

MICHELL'S SELECT FRUITS

Blackberry *Eldorado*

Currants

Gooseberries

Every garden should have some space reserved for small fruits. None bought in the market can compare with those picked fresh by yourself when you want them. Any surplus that cannot be consumed may be put up for winter use.

PLEASE NOTE.—The following states forbid the shipment of Gooseberries and Currants within their boundary, owing to their quarantine against the White Pine Blister Rust. We are therefore unable to accept orders for these plants for shipment into these states: California, Colorado, Delaware, Georgia, Idaho, Kansas, Maine, Maryland, Massachusetts, Minnesota, Montana, Nebraska, Nevada, New Hampshire, North Carolina, Oregon, South Carolina, South Dakota, Tennessee, Utah, Washington and West Virginia.

BLACKBERRIES (Extra Strong Plants)

Blackberries thrive most anywhere. The plants are subject at times to attacks of rust, particularly during prolonged wet spells in summer. A spraying, especially underneath the foliage, with copper solution, usually arrests this. However, if the disease spreads too much, it is best to dig up the bushes, burn them and plant new ones in another part of the garden. If they are sprayed before being affected it is the best plan.

Eldorado. A very vigorous grower, free from mildew or rust; enormously productive; fruit large, excellent quality and without core.

Mersereau. Remarkably strong grower. An enormous producer of extra size berries, which are brilliant black and retain their color under all conditions; very sweet and without core. Unsurpassed as a shipper and keeper.

Ward. An extra strong grower; produces an enormous crop of extra large, glossy blackberries, which are rich, sweet and tender and with no hard core.

Price of Blackberries, 6 for 75c. (by parcel post, 85c.); \$1.00 per doz. (by parcel post, \$1.15); per 100, \$7.00.

CURRENTS (Extra Strong Plants)

Currants like good, rich soil. They are particularly susceptible to scale, and steps should be taken to keep them free from this by liberal spraying, when the bushes are dormant.

Red Dutch. An old and well-known standard variety; clusters average about three inches long; berries medium in size, dark red.

Price, strong 2-year old, 3 for \$1.00 (by parcel post, \$1.15); per doz., \$3.00 (by parcel post, \$3.25); \$20.00 per 100.

GOOSEBERRIES (Extra Strong Plants)

Gooseberries should be cultivated during the growing season and fertilized with manure in the early spring or late fall. They will repay you for this trouble with an extra big crop.

Downing. Medium to large; whitish green; flesh soft and juicy.

Red Jacket. Berries medium; color, pale red, tender and good. A wonderful cropper, with clean, healthy foliage.

Price, 3 for \$1.00 (by parcel post, \$1.15); doz., \$3.00 (by parcel post, \$3.25); \$20.00 per 100.

SPECIAL NOTICE ON GUARANTEE

We spare no effort to supply "small fruit" bushes of the best quality in first-class living condition. On account of the many causes beyond our control we regret we cannot guarantee this stock to live and establish itself, as that is usually entirely within the power of the buyer or grower. If customers desire us to guarantee these and trees and shrubs to live we will assume such guarantee at an advance of 25 per cent. over and above our usual prices, but not otherwise, and such guarantee will expire within 90 days from date of shipping.

GRAPE VINES

A few of these plants in the garden after several years will yield abundant crops and they last for years with little attention except pruning and spraying.

Caco. The most delicious of all Grapes and perfectly hardy; it has been pronounced by America's most expert grape growers to equal in high quality and melting texture the finest varieties grown under glass. When one considers the price of the greenhouse product and realizes that the wonderful Caco can be grown in the back yard, almost without attention, the force of the above statement is apparent. The large berry is wine-red. Bunch of good size, compact and of good form. Ripens in ten days to two weeks in advance of Concord; rich in sugar, excellent in flavor. Vine a very strong, vigorous grower, healthy and prolific. This is a very fine variety and is easily worth the slight advance in price over the older varieties. 75c. each (by parcel post, 90c.); doz., \$7.50 (by parcel post, \$8.00).

Campbell's Early. A valuable and delicious grape; vine very strong, hardy and vigorous, with thick, healthy foliage; berries large, black, with light purplish bloom; skin thin; few and small seeds; flavor rich and delicious.

Catawba. Delicious flavor; medium size, red berry.

Champagne. A sterling variety of great merit. Color a coppery red. Berries very large. Immense producer. Seasons in which other varieties did not fruit, this variety stood out, bearing an immense crop. Very strong grower, fifteen to twenty feet or more a season being common. Has never been known to winter kill. 75c. each (by parcel post, 90c.); doz., \$7.50 (by parcel post, \$8.00).

Concord. The well-known standard purple variety; succeeds wherever grapes will grow.

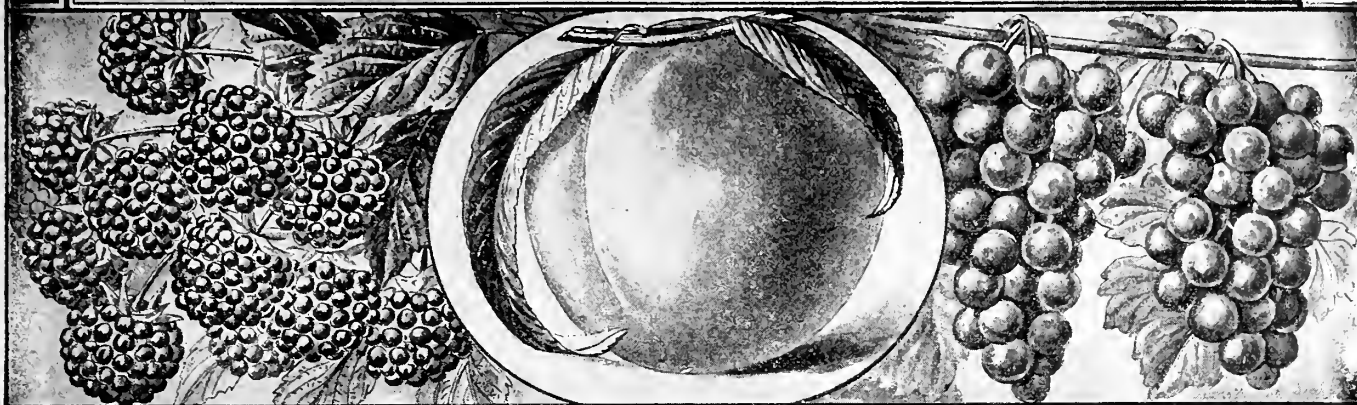

Moore's Diamond. A strong healthy grower; hardy and productive; color, white; berries large, flesh tender, juicy, but with little pulp; ripens before Concord.

Niagara. An unusually strong grower; bunches very large and compact; berries large, light greenish-white, semi-transparent; has very little pulp and is sweet to the center.

RASPBERRIES (Extra Strong Plants)

Raspberries should be carefully staked, to get large crops. We also recommend that well-rotted manure or other suitable fertilizer be dug around the bushes, either in the fall or early spring.

Cumberland (Blackcap). These do not transplant successfully in the Autumn and will therefore be offered in our Spring catalog.

Cuthbert. Berries very large, measuring 3 inches around; conical, rich crimson; one of the old-time favorites.

Ranere Everbearing. The most popular Raspberry in cultivation, bearing continually from July until well into November. Its main crop is produced in the earlier period, but substantial quantities may be harvested almost every day until sharp frosts appear. The fruit is of good size and of excellent flavor, in fact there is no good quality any of the regular varieties of raspberries possess that is lacking in Ranere; a few dozen bushes will supply the average family with sufficient for table use and a surplus for canning. The color is a brilliant red.

Price, any of the above, strong plants, 6 for 75c. (by parcel post, 85c.); \$1.00 per doz. (by parcel post, \$1.15); per 100, \$7.00.

PURE SPORE CULTURE SPAWN

A fine crop of mushrooms can be secured with very little labor or expense, provided a suitable location can be obtained. Cellars, greenhouses and sheds can be used for their culture. This spawn is made in quart milk jars under absolutely sterile conditions. The bottle and materials are sterilized under steam pressure of twelve lbs., so that every mould, weed seed or insect is destroyed and each bottle contains nothing but the pure spawn. Every particle is full run, covered with spawn grown direct from the spores. One carton of the spawn equals 5 bricks of ordinary spawn and is sufficient to spawn about 40 square feet. The sterile spawn is dried thoroughly and each piece wrapped in tissue paper, which contains full instructions, not only as to how the spawn should be used, but full particulars about growing mushrooms. Any one can order spawn and with it get the necessary knowledge to make growing entirely successful.

RHUBARB ROOTS (Ready last of October)

Rhubarb is as readily obtainable in winter as in spring. The clumps, which should be at least four years old, should be planted in good garden soil in a cool cellar, preferably as dark as possible. When practicable, a barrel or a peach basket, either without a bottom, should be placed over each root to draw the top up. Does extra well under greenhouse benches. Place the roots as close as possible. When spring approaches and rhubarb is obtainable outdoors the clumps may be planted out for use another season. The roots should always be subjected to a slight frost before planting indoors.

MICHELL'S RELIABLE GRASS SEED

All prices Subject to
Market Changes

Our grass seeds are rigidly tested for purity and germination at the growing point, in the laboratories of the United States Department of Agriculture and by ourselves, and will be found of highest quality. We make special formulas to suit various soils, climatic and local conditions.

Quantity to Sow for Lawns. On a small scale a quart will usually seed a space 10 x 10 feet though twice that quantity is better; 6 to 8 bushels of 20 lbs. per bushel on new ground without grass, is the proper quantity per acre; 1 peck is needed for a space of 1000 square feet; $\frac{1}{2}$ bushel for a space 2000 square feet; 1 bushel for a space 4000 square feet or say 40 x 100 feet. For Putting Greens we advise 100 lbs. of seed for greens 100 x 100 feet. For Fairways, 8 to 10 bushels per acre. For Pasture and Hay Fields, 4 to 5 bushels per acre, based on a 20 pound bushel.

If Mixed Grass Seeds are wanted by parcel post, add for postage as follows: 10c. for 2 qts.; 10c. for 4 qts.; 15c. per peck; 20c. per $\frac{1}{2}$ bu.; 35c. per bu.

MICHELL'S CHOICE RECLEANED SEED WHEAT

FORWARD (Beardless)

This new variety recently introduced has gained rapidly in popularity. It has wonderful stooling properties, a single grain having been known to produce as high as fourteen stalks. A heavy yielder, 55½ bushels per acre having been recorded. A very hardy variety, straw very thick-walled, of good length and bears up its heavy load of grain well. This variety is well liked by millers, the grain being of a dark color and of hard texture; medium early in ripening. Sow 1½ to 2 bushels per acre. Per pk., 90c.; \$1.70 per ½ bu.; per bu. \$3.25.

LEAP'S PROLIFIC (Beardless)

A most prolific variety indeed and may be relied upon to give big crops. It stools out strongly and roots deeply. The grain is large, dark red and of the best milling qualities. The heads are large, the chaff is beautiful white and is without beards. "Leap's Prolific" is one of the earliest to ripen and we recommend it as an all around good variety. Sow 1½ bushels per acre. Per pk., 85c.; \$1.60 per ½ bu.; per bu. \$3.00.

"MIRACLE" (Bearded)

This valuable wheat was introduced by us in the vicinity of Philadelphia several years ago. It produces a magnificent heavy growth of straw which is very stiff and erect. The head is bearded and contains well-shaped red grains of a semi-hard nature of excellent milling qualities. It is a tremendous stooier, one grain producing as many as 25 stalks with often 45 grains to the head or stalk. It is readily seen that this wheat should produce on average conditions an enormous crop, its usual rating being anywhere from 40 to 50 bushels per acre under average conditions. The introducer impressed upon us very forcibly **not to recommend the sowing of more than one bushel per acre**, as if seeded heavier it is liable to choke itself, on account of its free stooling habit. It is early to mature and produces straw often 5 feet high. Per pk., 85c.; \$1.60 per ½ bu.; per bu., \$3.00.

PENNSYLVANIA 44 (Bearded)

A new variety originating at the Pennsylvania Agriculture Experiment Station and developed from the Fulcaster. Grains red, purple straw, white chaff. It is a few inches taller than Fulcaster, and with stiffer straw. This variety has yielded an average of 35 bushels per acre for the last several years. Sow 1½ to 2 bushels per acre. Per pk., 90c.; \$1.70 per ½ bu.; per bu., \$3.25.

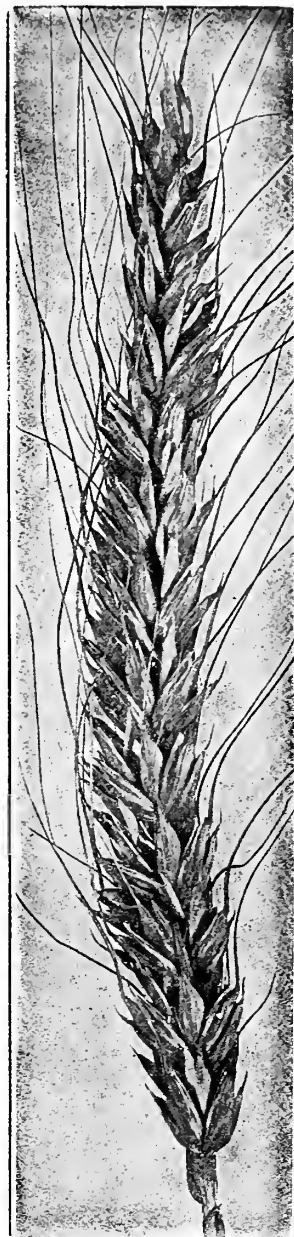

RED WAVE (Beardless)

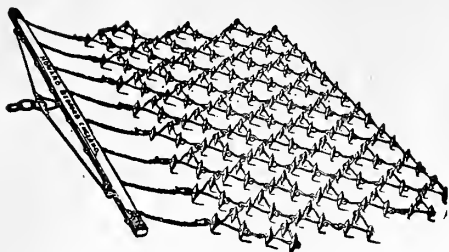

A very popular variety, succeeding in all kinds of soil and has been especially successful in lands not too rich in lime. Upon sandy, gravelly soil Red Wave is especially suited. This variety is a heavy producer; heads are extremely long, with grains closely set; on good rich soil this variety has yielded 40 to 45 bushels per acre. It takes a little longer for this variety to mature than the earliest varieties. The straw is long and withstands storms remarkably well. Grains large and dark red and produces flour of good quality. This is truly a worthy variety, the result of a cross of Red Clawson and an unnamed cross-breed of Russian parentage. Per pk., 85c.; \$1.60 per ½ bu.; per bu., \$3.00.

Prices on larger quantities of Seed Wheat will be quoted on application.

In ordering Farm Seeds allow 40c. for each 2 bushel bag. These are returnable for credit.

Comparatively few of us recognize the great economic value of birds. Particularly the blue birds, house wrens and martins are very easily domesticated. Their favorite nesting sites are bird houses made for their use which may be placed about in the garden and farm or in orchards. As rent, these grateful birds pay amply, destroying millions of insects annually. If you put up bird houses in the autumn or before the birds arrive in the spring you may be able to keep birds with you all winter if you provide them with shelter and food.

81. SQUIRREL HOUSE

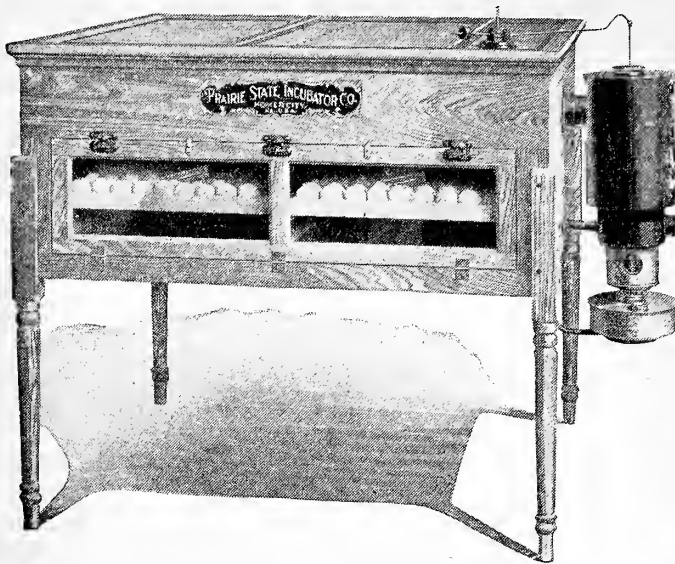

The trouble with the ordinary squirrel houses is, that all sorts of birds will try to build in them, particularly the sparrow. This house is arranged so that no birds will try to use it, the hole is on the bottom. A narrow passage leads up to another opening leading over into a snug room for the squirrel's storehouse and nesting place. Put high up in crotch of a tree. Price, \$5.50 (by P. P., \$6.00).

SPARROW TRAP (Wire)

We have tried this out and found it to be the best trap made. Scatter a little cracked corn and set the trap right over it. You'll be surprised at the catch. \$6.00 each (by P. P., \$6.50).

It requires no attention except coaling once in 24 or 48 hours according to weather. The "Eureka" is made in Philadelphia and is sold at a very attractive price because the capacity for manufacturing them is large and conditions favorable. PUTNAM BROODER HEATER

This can be used in any home-made brooder. The heater is so constructed that it acts like an open fireplace, carrying the foul air out and drawing the fresh air in, thus providing perfect ventilation automatically. Heat is radiated from above onto the backs of chicks, giving the natural and soothing effect of the hen, without the lice. The brooder heater is made of brass and galvanized iron and is practically indestructible. Every brooder heater is accompanied by easily followed directions for building the home-made brooder. Price of heater, \$4.75 (by P. P., \$5.00).

LITTLE PUTNAM STOVE

This is used under the drinking vessels of the poultry house to keep the water from freezing in the coldest winter weather. The stove is nine inches in diameter and four inches high; made of galvanized iron and equipped with a burner which embodies an entirely new principle in oil combustion. Combustion is complete and perfect, doubling the heat value of oil. The oil tank holds three pints of oil and burns three to four weeks without refilling or any other attention; the wick never needs trimming. Price, \$1.95 (by P. P., \$2.10).

FARM BROOD COOP

Price, complete, \$6.25.

THE NEW 1928 MODEL SOL-HOT BROODER

Sol-Hot is the only brooder on the market that has a different size burner for each size canopy. It costs more to build them this way but it means economy for you.

You take no risk when you order a Sol-Hot

If you are thinking of buying a brooder this season by all means buy a Sol-Hot—it means so much to you in the way of saving of labor and better results in the rearing of your chicks.

You may be able to buy a brooder that costs a little less money but based on the better value you get—the more chicks you will raise—the freedom from trouble—the elimination of fire hazard—Sol-Hot is by far the cheapest brooder in the long run.

It's the Twin Float Automatic Oil Level Control

Sol-Hot, with its many years of undisputed leadership once more steps "Way out in front" this season with the greatest invention ever made for oil-burning Brooders. The patented TWIN-FLOAT Oil Level entirely eliminates the trouble and bother of having to level up the brooder in order to get it to burn properly. Equipped with the New Twin-Float Oil Level the Sol-Hot Brooder can be set anywhere, regardless of uneven floor conditions. Comes assembled, ready for immediate operation. No leveling of any kind needed.

No danger from fire—no trouble—no worry. All you have to do is to put oil in container, prime and light the burner, and turn flame control valve—like knob on gas stove—to height desired. The oil container is connected to the burner with copper tubing. It can be set anywhere on the floor, on a shelf, high or low—it makes no difference. Burner cannot overflow—cannot go out—the Twin-Float absolutely prevents it.

PORCH, BARN AND FENCE PAINT

Probably no finish gets as many varied abuses as the porch floor paint. It is walked on, furniture is dragged over it and it must withstand the hot sun, hard rains and extremes of temperature. Sherwin-Williams Porch and Deck Paint is made of materials that gives unusual toughness with the necessary elasticity to stand these hard knocks. It dries with a good gloss which makes it easy to keep clean. Repeated scrubbing will not dull the finish. Per qt., \$1.10; \$3.85 per gal.

SHINGLE STAIN

This is ideal for use on shingle roofs and sidings. They are penetrating stains—not thin paints that wash off or fade. They contain refined creosote and other liquids that penetrate and stain the wood to a considerable depth.
